

Computers Unlimited Announces New Bulk Gas Telemetry Integration with VMG – Vendor Managed Gas

Empowering Users with Real-Time Insights and Proactive Management for Enhanced Efficiency and Safety

April 15, 2024, Billings, MT – [Computers Unlimited \(CU\)](#), developer of TIMS® and the leading provider of integrated ERP solutions for industrial welding and gas distributors, is thrilled to announce an integration with telemetry provider [Vendor Managed Gas \(VMG\)](#). This integration will empower TIMS® customers to deploy VMG telemetry products on their bulk gas installations and monitor them remotely within the TIMS® platform.

VMG Telemetry Transceivers, renowned for their precision and reliability, collect crucial pressure, level, weight, or flow data and effortlessly transmit the readings to the collector through long-range radio frequency (LoRa RF) or Bluetooth® technology. With the ability to monitor multiple inputs simultaneously, each VMG solution ensures comprehensive oversight of gas systems and total gas management for all types of gases and containers, enhancing efficiency and safety for TIMS® users.

"We are excited to collaborate with VMG - Vendor Managed Gas and offer this new integration to our customers," said [David Schaeer](#), President of Computers Unlimited. "At CU, we prioritize listening to the needs of our customers, and this integration exemplifies our commitment to providing innovative solutions that enhance operational efficiency and drive business success."

"Working together with CU to provide integration with VMG technology will provide an immediate benefit to the customers of both companies," said [Brian Oeder](#), Chief Executive Officer of VMG. "As the data needs of the market continue to grow, having expanded cooperation between CU and VMG will provide our clients with the ability to make the decisions critical to managing their operations throughout the entire gas supply chain."

With the TIMS® platform's unparalleled flexibility and VMG's industry-leading telemetry solutions, users can seamlessly monitor their bulk gas installations with confidence, knowing that they have access to real-time data and actionable insights.

About Computers Unlimited:

From our home state of Montana, [Computers Unlimited](#) has been developing software solutions and providing customer support for 45+ years. Our flagship product, TIMS®, handles all the daily business functions for [distributors](#) of industrial gas and welding supplies.
