

THE WORLD IS CONNECTED, SO IS TIMS

The use of mobile applications has become its own eco-system around the world as businesses both large and small have incorporated mobile apps to increase productivity dramatically. Our new mobile applications let you do business when, where, and how you need to, using smartphones or tablets.

TIMS Assistant is the perfect mobile assistant for your entire sales team. It makes everyday sales tasks a breeze—from checking price and availability, creating mobile orders, reviewing customer account information, to capturing contacts, and creating *Notes* and *Tasks* for customers and prospects. TIMS Assistants' latest feature lets you process customer cylinder returns right at your dock. It's mobile service at the point of service.

TIMS Delivery is the next generation of mobile computing built to do more than just deliver. Real-time connectivity lets you update existing orders and create new orders on the fly. Track truck location with GPS and service times for each order. Record line item details for cylinders, bulk gases, hardgoods, and rentals with the built-in camera, SIP keyboard or an external Bluetooth barcode scanner. Calculate customer pricing, taxes, and fees automatically for each order. Accept credit card payments to streamline invoicing then email electronic proof of delivery and receipt.

TIMS Plant targets fill plant operations—from tagging new cylinder assets, verifying and updating barcoded cylinder information, cylinder filling, and location transfers, to truck load/unload/reconcile functions.

Best of all, TIMS mobile applications run on real-time, and as always, are fully integrated with your core TIMS system giving you the up-to-minute data you need.

"TIMS Delivery was instrumental in helping us exceed our savings goals. We have a complex delivery model and saved more than 4.9 million dollars annually since full implementation. Updating orders in TIMS instantly upon delivery and eliminating labor-intensive, back-office manual processes were major factors in realizing these savings."

Oscar De Los Monteros, Preferred Homecare - home delivery of medical oxygen and medical equipment
